

EFFICIENT, SAFE & PROFITABLE

Ideally located in the leadup to a crush, manual or auto draft system, ProWay's Cattle Weighbox has been developed and refined to accurately weigh and record all age and breed cattle.

The offside can be fitted with panel readers and is made with heavy grade PVC sheeting to eliminate interference with EID scanning. The operating side is built with premium grade Australian galvanised steel and is $\frac{3}{4}$ sheeted to maintain a visual on stock.

The adjustable panel on the working side quickly and easily reduces the race width at the base allows for accurate weighing of all size cattle without them turning around, while hanging weighbars keep the load cells out of the muck to ensure longevity.

- Designed for high throughput on farm, feedlots and commercial operations
- The offside can be fitted with panel readers and is made with heavy grade PVC sheeting to eliminate interference with EID scanning
- Optional: side opening access door and head bale to make the weighbox a multifunction vet crush
- Optional: autodraft functionality with automated pneumatic operation drafting from 3 up to 7 ways

CATTLE WEIGHBOX

Current at: 21 May, 2025

Cattle Weighbox

Standard Cattle Weighbox 2.7m long with Adjustable Side

\$5,885.00 (ex GST)

- Timber side (one side) to mount panel antenna
- Weighbars to be bolted underneath
- If weighbox is fitted directly behind crush no front slide is required
