EFFICIENCY, SAFETY AND PROFITABILITY ADVANTAGES

"We're very happy with the whole project. The Lane Delivery system is working well here, the shearers like it and I don't see why it wouldn't work anywhere else."

Jim Head, Mandurama NSW

SHEARING ADVANTAGES

The ProWay Modular Lane Delivery Shearing Board, represents industry leading shearing technology. This innovative system is designed to enhance efficiency, safety, and productivity in wool harvesting.

The unique lane delivery system facilitates a continuous flow of sheep to the board, minimising downtime and maximizing throughput.

Sheep are moved directly to the shearers in single file, reducing handling stress associated with traditional catching pens.

- Provides significant WH&S benefits to shearers by reducing the catch and drag distance and twisting required in a traditional board design.
- Increased efficiency and productivity for shearers, facilitating more shorn sheep per run.
- Reduced labour costs and increased productivity translate to a faster return on investment.

REDUCED LABOUR WITH INCREASED WORKPLACE HEALTH AND SAFETY

ProWay's Lane Delivery system has been refined with the welfare of both shearers and sheep in mind.

- Eliminates the need for shearers to manually catch and drag sheep over long distances, reducing physical strain and the risk of injury.
- Sheep are fed directly to the board, allowing shearers to focus solely on shearing. The result is a significant increase in the number of sheep shorn per day.
- Ergonomically designed workstations reduce physical strain on shearers, while the adjustable width lane is optimised for varied size sheep, lambs and rams.
- Raised board with recessed chutes allows safe release of shorn sheep.

PROFESSIONAL INSTALL OR MODULES SUPPLIED AS A STANDALONE UNIT

Tailored to suit varied scale wool producers, ProWay's modular design allows for easy customisation and expansion, from supply of single modules to bespoke fit outs of complete shearing sheds.

Available as a permanent or relocatable structure, ProWay offer the lane delivery system as part of a complete shed design and construct project or as standalone modules.

The modular components are designed and supplied for efficient installation that give you an operational board without a drawn out construction process.

ProWay's commitment to durability ensures long lasting performance and reliability. Built with high quality materials, the modular components are built to withstand demanding shearing shed conditions with a focus on longevity of infrastructure.
