

Our old yards weren't going to cut it, ProWay have a reputation as elite yard builders we were encouraged by them being local, it was a no brainer.

Daryl Schipp | Owner
Schipps Red Angus, Alfretdtown, NSW

DO IT ONCE, DO IT RIGHT

For over 20 years, ProWay Livestock Equipment have been proudly designing, manufacturing and installing professional stock yards, shearing sheds and livestock handling equipment all throughout Australia and the world.

Our custom design approach ensure no two facilities are exactly the same. ProWay stock yards and shearing sheds are designed to maximise stock flow, productivity, efficiency, animal welfare and safety for your operation.

These design components result in time & money saved, reduced required labour, quality contractors and staff recruited & retained as well as more comfortable workplace for both staff and animals.

ProWay's experienced Design Team will factor in your operational requirements, personal features, existing infrastructure and future expansion opportunities to ensure your new facility or equipment is optimised to suit your goals and desired outcomes.

Our products are fabricated at ProWay HQ in Wagga Wagga NSW. ProWay's products and designs have been refined over time through research, testing and most importantly, direct client feedback.

Our yards and equipment are held to high quality control standards. As a result, ProWay's stock yards offer industry leading reliability, productivity and safety.

CUSTOM DESIGN PROCESS

Our Custom Design Process is one of a kind. **ProWay's Custom Design Process is a comprehensive, industry leading, unique experience** that ensures your new facility is tailored to your operational requirements.

From yard orientation, bugle angles, EID requirements, relative yard size and even gate lengths, our Designers seek to factor these into your custom design to ensure stock flow is maximised and productivity and operational efficiencies are greatly improved.

ProWay's experienced Design Team avoid cookie cutter solutions, no two ProWay facilities are exactly the same.

Our Designers will visit your site and use the latest in drone, satellite and surveying technology to accurately measure your site. We rely on a comprehensive 30-point checklist to produce the best possible outcome for your enterprise.

ProWay use CAD software to accurately draw your stock yards or shearing shed and will be able to showcase dimensions, handling equipment and holding capacities all whilst incorporating existing infrastructure such as sheds, transport access, trees, fencing and existing yards.

Your Designer will work with you to advise on roof over structures, concrete and amenities as well as critical site preparation and drainage requirements.

For our operation, this is our header – the new ProWay yards are an asset that will add value to this property, they'll last us at least 50 years.
