

THE CHOICE OF LIVESTOCK PROFESSIONALS

ProWay's aim is simple, to design and build livestock handling products that make livestock handling more efficient and safer for our clients.

By designing yards which utilise natural stock movements and instincts, ProWay provides a safer and less stressful working environment for both livestock and operator.

WORK SMARTER NOT HARDER

The Suspended FRP Floor Working Race increases labour efficiency by reducing bending and strain associated with sheep husbandry.

Developed to elevate sheep to a comfortable working height for operations traditionally performed in a race and is an effective classing race for rams and ewes for individual assessment.

Sheep are higher so there is less bending for the operator while the void under the floor offers room for your feet for close working proximity, as well as drainage.

The floor is made from durable FRP (fibre reinforced plastic) panelling which is supported by an engineered subfloor made from galvanised components.

Other features include:

- Adjustable top rail for access to varied size sheep/lambs
- Minimised use of concrete in the race making installation quick and cost effective.
- Can include any combination of our standard race gates depending on requirements including:
 - Sliding gates
 - Tumble Swing Gates
 - Guillotine Gates
 - Draft gates
 - Handling gates to open race sides for a handler or weigh crate

Proudly Designed & Manufactured in
Wagga Wagga, NSW, Australia
