

The Bulk Handler just takes the stress out of the job for livestock and operator.

“Honestly it is an amazing piece of technology. It’s fast and easy to fill, but the best thing is you just aren’t bothered at the end of it.”

Andrew Carmichael | Property Owner
Patanga Park, Buffalo, VIC

ProWay’s Sheep and Goat Bulk Handler positions sheep at a comfortable working height, improving efficiency and safety for many husbandry tasks.

Animals are ushered into the race section of the Handler in groups of 15-25 at a time, dependent on size and wool. The suspended floor is then lifted hydraulically, with stock raised and immobilised for treatments to the head, neck and back.

Livestock are suspended on their underside, and become very passive as they are caught as a group, in a comfortable position.

The Bulk Handler is ideal for:

Drenching, vaccinating, capsuling, mouthing, back lining, jetting and tagging.

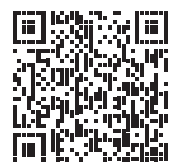

PROFESSIONAL RESULTS

Tailored to suit varied scale livestock operations, the ProWay Bulk Handler provides:

- Increased throughput levels as opposed to an individual handler, processing bulk lots at a time.
- Sheep and goats are brought to a safe and ergonomically comfortable working height and are unable to bury their heads.
- Improved animal welfare with less stress, reduced confinement time and minimal bruising on stock.
- Operators are physically separated from treatments being applied by sheeted sides.
- Animals receive correct doses and even application.
- Timely husbandry due to increased efficiency and ease of operation.

6M & 12M Permanent Bulk Handler

Available in 6M and 12M units, the Permanent Bulk Handler is designed to be fixed to a concrete slab.

- Supplied as a flat pack consisting of fitted frames which require basic bolt together assembly on site.
- Complete unit requires slab approximately 2.6m wide (for adequate 800mm walkway).
- 6m unit slab should be at least 6.5m long while the 12m unit requires a slab at least 12.6m long.
- Sheep enter the unit on a concrete floor which minimises noise and is easy to clean/maintain.

6M Mobile Bulk Handler

Designed for moving between yard sites locally and on farm, the Mobile Bulk Handler has a removable wheel and tow frame when in use.

- Simple to setup, the hydraulic ram has a dual purpose for putting the handler in and out of mobility.
- Wheel frame slips off the fixed axle and the walkway simply folds down eliminating trip hazards.
- Hot dipped galvanised floor allows setup on any flat surface in permanent or portable yards.

6M Contractor Bulk Handler

Developed for high throughput and regular travel between properties, the Contractor unit has a fixed dual axle and walkways.

- Designed for high throughput and frequent travel by husbandry contractors or operations with significant travel between yard locations.
- As unit is raised off ground a detachable ramp is supplied for filling the handler.
- Fixed dual axle and walkway means no setup or pack up required.

All ProWay Bulk Handlers are supplied with an electric hydraulic motor, which requires 15amp power supply or 8kVa generator.

Entry and exit gate options available.

DURABLE AND EFFICIENT PROTECTION FROM THE ELEMENTS

ProWay have developed a simple and effective Roll Over Roof system for the Contractor Bulk Handler.

Building on the ethos of efficient setup at multiple yard sites, this innovative addition functions like a roll tarp for a semi-trailer, providing essential shade and weather protection while you process and treat sheep.

Setting up the Roll Over Roof is quick and easy for a single operator, taking less than a minute to setup with no heavy lifting, poles or ropes required.

Simply fold out the support arms either side of the handler and effortlessly wind out the canvas roof, ensuring yourself and the handler are protected from the elements.

The canvas is easily extended over the frame with an extended handle which is suspended out of the way when the Bulk Handler is in use.

- Simple one person setup in under a minute
- Provides shade and protection from the elements when using the handler
- Fully integrated in the Bulk Handler frame with no extra parts to carry
- Easily rolls away and locks in place for transport and when not in use
- Durable canvas cover supported by galvanised fold-out support arms

Sheep Bulk Handler - Permanent

6m ProWay permanent sheep bulk handler

\$24,165.00 (ex GST)

- 850mm internal width. \$26,580.00 (inc GST)
- Fully sheeted sides.
- Galvanised construction.
- Hydraulically operated, powered by a 2.2 kw electric motor.
- Pump is remote to the unit for quiet operation.
- Power supply required is 15 amp, 240 volt, or an 8 kva generator.
- Removable lamb weaning bar (also suitable for goats)
- Holds 15-25 sheep.
- Delivered in kit form. Requires bolting together on site.
- Bulk handler power pack, valves, hoses, cylinders and fittings covered by 12 months warranty. Excludes damage caused by misuse, accidents or interference by operators.
- Proudly designed and manufactured in Australia

6m ProWay sheep bulk handler (no mobility unit)

\$29,625.00 (ex GST)

- 850mm internal width. \$32,585.00 (inc GST)
- Fully sheeted sides.
- Galvanised construction.
- Hydraulically operated, powered by a 2.2 kw electric motor.
- Power supply required is 15 amp, 240 volt, or an 8 kva generator.
- Pump is remote to the unit for quiet operation.
- Hot dip galvanised flooring for durability.
- Work platform both sides.
- Removeable lamb weaning bar (also suitable for goats)
- Holds 15-25 sheep.
- Bulk handler power pack, valves, hoses, cylinders and fittings covered by 12 months warranty. Excludes damage caused by misuse, accidents or interference by operators.
- Proudly designed and manufactured in Australia

12m ProWay permanent sheep bulk handler

\$41,365.00 (ex GST)

- 850mm internal width. \$45,500.00 (inc GST)
- Fully sheeted sides.
- Galvanised construction.
- Hydraulically operated, powered by a 2.2 kw electric motor.
- Pump is remote to the unit for quiet operation.
- Power supply required is 15 amp, 240 volt, or an 8 kva generator.
- Unit is available in modules of 6 metres. Each module lifts independently.
- Removeable lamb weaning bar
- Holds 30-50 sheep.
- Delivered in kit form. Requires bolting together on site.
- Bulk handler power pack, valves, hoses, cylinders and fittings covered by 12 months warranty. Excludes damage caused by misuse, accidents or interference by operators.
- Proudly designed & manufactured in Australia
