THE IDEAL MOBILE SOLUTION

ProWay portable sheep yards are a robust and effective substitute for permanent sheep yards when mobility is paramount. The ability to customise and relocate your stock yards has many benefits and the simple and straight forward trailer system allows for comfortable towing on farm and on public roads.

The trailer is fitted with towing suspension and the main body is made up of an adjustable V race with 3 way drafting capabilities, panel support bars, removable tow frame, permanent axle with slip on wheels and a winch to assist during pack up/setup.

The trailer has the ability to hold 19 panels on each side and up to 10 internally including sheeted panels. It can be purchased as a medium (21 panel) or large (40 panel) module with yard designs that can incorporate existing fence lines or be setup as a standalone system. Accessories available to compliment the unit include: Gate frames that convert panels into gates, race hoops and race gates to form a handling race at the front of the draft and junction adapters for joining more than 2 panels at one intersection.

PORTABLE SHEEP YARDS

Proudly Australian owned, designed & manufactured.

THE BENEFITS OF MOBILITY

At ProWay we understand stock behaviour and the need for efficient yard solutions that promote stockflow and ease of operation. ProWay portable sheep yards are no exception and offer many of the qualities of permanent sheep yards with the added benefit of mobility.

This flexibility allows for many different layouts and design options, as well as simple relocation which is particularly useful on small and large scale properties. With a panel height of 1050mm and lamb proof bottom rails, the ProWay portable range is a suitable alternative for sheep producers not requiring permanent infrastructure.

Our portable panel range has a single pin joining system that is strong and simple to erect.

The two standard panels available allow for a multitude of design flexibility and are available as:

2.7 metre 7 Rail Panels

Rails: 20 NB (26.9 OD) galvanised steel pipe rails Hot dipped galvanised 12mm sprung steel joining pin and insert 50 x 4 galvanised flat brace welded centre of panel for strength.

1.6 metre Fully Sheeted Panels

3 x 20 NB (26.9 OD) galvanised steel pipe rails Sheeted with 1.5 mm galvanised sheet Hot dipped galvanised 12mm sprung steel joining pin and insert 50 x 4 galvanised flat brace welded centre of panel for strength.
